

What were they building...

...near the Mount Evelyn petrol station?

It's a rain-garden...

...funded by a university research project

The same funding is available for **you**, to install rain-water tanks at your home, to help you save water and money.

So far, we:

- have installed tanks at 90 homes
- have paid 73% of costs (on average)
- are saving 11,000,000 litres of water a year

To register or for more information  
[www.urbanstreams.unimelb.edu.au](http://www.urbanstreams.unimelb.edu.au)

The rain-garden was built at Hereford Road to retain and filter storm-water runoff, to help protect Little Stringybark Creek from pollution and erosion.
